

# Qwant Maps Flashpoint

## Top Priorities

- Improve **itineraries**: fix misc bugs (front problems + incoherent itineraries), add **public transports**.
- Geocoder **ranking**: update to ES5/6, misc bug fixes, admins prioritization, new queries template...
- **Pages Jaunes**/Local search: integration with default categories filters in the front home.
- **Changelogs**: make QMaps global releases along with changelogs.
- **Business Logs**: set up the business logs exploitation pipeline.

## Side Points & Issues

- No more full time **front-end developer** from April 5th: critical impact on releases frequency.
- **Proxy Mapbox**: timeout problems on itineraries (investigate cache).
- Close collaboration with our partner (Kisio) to improve the geocoder **ranking**.
